Be mindful of spelling. Even one misspelled word can affect your results. The more specific your search terms, the better your search results. If you start with common words like "dog", then search engines will include all words that begin with them in their search results. This is not a very useful result. To find specific breeds of dogs, you will need to use the word in a different case. For example, you can write a query to get a list of the most popular dog breeds, but you will need to write it in "males" and not just "dogs".
